The foregoing list shows the names of the streets on the north and south sides of the river Liffey which form the several classes of streets just described. The streets printed in italics were not specified in the special report on the City of Dublin in 1851;

SPECIAL SANITARY REPORT ON DUBLIN CITY.

Municipal Boundary. some of them having been included with the wards in which they are situated, some of them not having then been considered of sufficient importance to be classed, and others having been built since that period.

The municipal boundary of the City of Dublin remains the same as in 1851, covering an area of 3,808 acres—1,868 lying to the north, and 1,940 to the south side of the river; the boundary being thus defined by Act 3 and 4 Vic., cap. 108:—"From the intersection of Parkgate-street with a road running along the Phœnix Park wall until. it meets the Circular-road, and along the Circular-road to the west end of the R. C. Chapel of St. Peter; thence in a straight line to Hoey's mill, near Westmoreland-bridge over the Royal Canal; thence across the canal to its northern bank; thence along the . bank of the canal to Jones's bridge; thence along the road forming the continuation of Russell-street and Jones's-bridge to the Clonliffe-road; thence along the Clonliffe-road to the centre of Ballybough-bridge; thence along the centre of the river Tolka, to the centre of Annesley-bridge; thence south-east to a point distant 300 yards from the south-east corner of the wall extending from Annesley-bridge to the east wall, to the point where such line is intersected by a line drawn between two points, the one distant 300 yards eastward from the corner of the east wall, the other distant 300 yards eastward from the corner of the patent slip in the Ballast-office yard; thence southward along the last-mentioned line to the mid-channel of the river Liffey; thence westward along the mid-channel of the river until the line is intersected by a line drawn from the centre of Ringsend-bridge; thence southerly to the centre of Ringsend-bridge; thence westward along the road to Dublin until it intersects Barrow-street; thence along Barrow-street to Grand Canal-street; thence westward, along Grand Canal-street to Macquay-bridge; thence, in a westwardly direction, along the southern bank of the Grand Canal to its intersection with the branch leading to the City Basin, near Griffith-bridge; thence westward, in a straight line, to the south-west angle of the Circular-road; thence along the said road, through Island-bridge, and over Sarah-bridge, across the Liffey, to Conyngham-road; and thence eastward, along that road and Parkgate-street to the point first described."\*

Comparison of Returns from 1841 to 1861.

The total number of deaths which occurred within the municipal boundary of the City of Dublin from the 30th March, 1851, to the 7th April, 1861, was, according to the Census returns, 63,715, or 33,167 males and 30,548 females, being in the proportion of 92·1 of the latter to 100 of the former. The number of deaths returned in 1851 amounted to 73,982, or 38,596 males and 35,386 females, being in the proportion of 91·7 of the latter to 100 of the former. The boundary of the City of Dublin having been extended subsequent to 1841, the actual numbers then returned do not admit of close comparison with those of the two following decades; but the proportionate annual mortality to the population, was, in 1841, 1 in 30·2 in males; 1 in 39·7 in females; and 1 in 34·8 in both sexes together; according to the calculations made in 1851, the following was the ratio:—1 in 30·9 in males; 1 in 39·3 in females; and 1 in 34·9 in the two sexes; and according to the returns received for the past decade, the ratio of the mortality was:—1 in 35·8 in males; 1 in 44·8 in females; and 1 in 40·1 in both sexes together. Thus it will be seen that the annual ratio of mortality to the population within the City of Dublin had decreased 0·1 between 1841 and 1851, and had decreased as much as 5·2 between the latter period and 1861—an improvement to be attributed to better sanitary arrangements and to the absence of any remarkable epidemic.

Deaths by Ages and Localities.

Table I., on pages 56 and 57, exhibits by ages and localities the 63,715 deaths, of which a return was made in 1861; the average age at which they occurred; the population in 1861 (254,808), also the average annual mortality, and the ages at which the deaths will divide into equal numbers or nearly so. Contrasting the different classes of streets with each other, it will be seen that the least annual mortality occurred in the first-class private streets situated on the south side of the river, which afforded an average annual mortality of 0.76 per cent., or 1 in every 131.8 of the residents therein; the average age at which these persons died was 35-40. The streets next in order with regard to small mortality in proportion to their population, are those grouped as "first-class private," situated on the north side of the river, which afforded an average annual mortality of 0.88 per cent., or 1 in every 113.5 of the inhabitants thereof. Although the proportionate mortality in the first-class private streets situated on the north side of the river was somewhat greater than in those on the south side, the age, however, at which the deaths divide into equal numbers shows that the persons who had resided in the former lived to a greater age than those who had resided in the latter, the average age in the streets on the north side being 40-45 against 35-40, as given above for those

<sup>\*</sup> In some of the publications of the present Census, the suburbs of Dublin City have been constituted a civic district; the deaths, however, which occurred therein are not included in this special Report on Dublin City, which is confined exclusively to the deaths which took place within the Municipal Boundary. A description of the Suburban Boundary was given in the Enumeration Abstracts presented to Parliament in July, 1861, and may also be found in Part II., Vol. I, p. 50, and Part IV., page 32.

on the south side. The streets which afforded the largest proportionate mortality were those classed as third-class shop streets; those on the north side affording an average annual mortality of 1.91 per cent., or 1 in every 52.4 of their inhabitants in April, 1861, and those on the south, 1.86 per cent., or 1 in every 53.6 of their inhabitants. The ages at which the deaths divide into equal numbers or nearly so, in this class of streets, are 1-5 on the south side and 5-10 on the north side.

REPORT ON DUBLIE CITY.

Deaths by

According to the returns received in 1841 the mortality in first-class private streets was Ages and in 122.2 on the south and 1 in 111.7 on the north side of the city according to the 1 in 122.2 on the south and 1 in 111.7 on the north side of the city; according to those received in 1851 it was 1 in 132.8 on the south, and 1 in 122 on the north side.

With regard to the deaths which occurred in the several districts of wards comprised of those streets not considered of sufficient importance to be classed amongst the foregoing, the greatest number, in proportion to the inhabitants, was returned from the Wood-quay Ward, the average annual mortality being 1 in 43.8 of the population thereof in 1861; and the least proportionate mortality was returned from Mansion-house Ward, the ratio to the population being 1 in every 71.7 per annum. In 1851 the district in which the greatest proportionate mortality was shown was that of Inns-quay Ward, which afforded an average annual mortality of 2.47 per cent., or 1 in every 40.5 of its inhabitants at the close of the decade; and that which showed the least mortality was the district of Fitzwilliam Ward,

which afforded a return of 1.52 per cent., or 1 in every 65.8.

Table II. shows the deaths which occurred within the municipal boundary of the City Diseases of Dublin from the 30th March, 1851, to the 7th April, 1861, by localities and diseases. and From it may be observed the localities in which certain diseases most prevailed—thus, of the 1,170 deaths from small-pox, only 3 occurred in the first-class private streets on the south side, and but 1 each in the first-class private streets on the north side, and the firstclass shop streets on the south side; and with regard to fever, of 3,582 deaths therefrom only 7 each occurred in the first-class private and first-class shop streets on the north side of the city; and in those streets in the Fitzwilliam Ward which were not classed, only 7 deaths from fever occurred. And further, taking the deaths from all the diseases of the zymotic or epidemic class, it will be observed that only 38 each occurred in the first-class private and first-class shop streets on the north side of the river—being for the former 1 in every 80 of the population in 1861, and for the latter 1 in every 47; and that in streets of the same classes on the south side of the river the deaths were 93, or 1 in every 92, in the former, and 61, or 1 in 69, in the latter. The variation in the epidemic and other classes of diseases in the several classes of streets and wards, presents some remarkable and very interesting features. As, however, the matter is given so much in detail in the tables, pages 58 to 61, we do not feel it necessary here to enter more fully into it.

Table III., pages 62 to 69, shows, by occupations and causes, the deaths which Occupations occurred in the City of Dublin during the decade on which it is now our duty to report. and diseases.

From this table we make the following analysis:-No. 1. Clerical—includes the clergy of all denominations, or those specified in the enu-Clerical. meration of the occupations of the living as ministering to religion. Their deaths amounted in 1841 to 91, in 1851 to 99, and in 1861 to 96. Of these 96 persons, 11 died from diseases of the zymotic class, including 9 deaths from fever and 1 each from cholera and erysipelas; 18 from diseases of the brain and nervous system; 12 from diseases of the heart; 23 from diseases of the respiratory organs, and 10 from those of the digestive organs; 3 died from rheumatism; 2 each from gout, tumour, and old age; and 1 each from disease of kidneys, anthrax, mortification, malignant fungus, and abscess; 2 were drowned; 1 death was the

result of "accident" unspecified; and in 5 instances the cause was not specified.

No. 2. Medical—physicians, surgeons, apothecaries, veterinary surgeons, midwives, Medical. and nursetenders—being all exposed to the influence of disease, are here classed together; but the other occupations enumerated under the head of "Ministering to Health"such as dentist, druggist, truss-maker, dealer in leeches, &c.—not rendering persons specially liable to the influence of disease, are not embraced in this class. The deaths in this class returned in 1841 amounted to 112 males and 19 females; in 1851 to 121 males and 58 females; and upon the present occasion we have to report upon the deaths of 112 males and 42 females. Of these, 24 died of diseases of an epidemic nature, 13 from diseases of the brain and nervous system, a like number from diseases of the circulating organs, 48 from diseases of the respiratory organs, 17 from diseases of the digestive organs, 4 (all males) from diseases of the urinary organs; 1 female died from cancer uteri, and 1 from disease of the spine; 1 male died from anthrax, 19 persons died from diseases of uncertain seat, including 8 females and 4 males, whose deaths were attributed to infirmity and old age; the death of 1 male was caused by a wound; 2 males died from injuries of the head, and 2 from other accidental causes. In 8 instances the cause of death was not specified.

No. 3. Legal—consisting of judges, barristers, magistrates, proctors, and attorneys. Legal. Deaths in this class amounted, according to the returns received in 1841, to 168, in 1851 to 181, and in 1861 to 159. Of these 159 deaths, 10 were caused by diseases of the epidemic

SPECIAL
SANITARY
REPORT ON
DUBLIN
CITY.

CITY.
Legal.

class; as many as 32 were attributed to diseases of the brain and nervous system—a number much in excess of the deaths from such causes amongst the members of the two preceding professions—including 12 deaths from apoplexy, and 14 from paralysis; diseases of the circulating organs proved fatal in 20 instances, and those of the respiratory organs in 43; 9 deaths were caused by diseases of the digestive organs; 2 deaths each were attributed to diabetes, disease of bladder, rheumatism, and cancer; 3 to gout; 1 death was ascribed to tumour, and 1 to abscess; as many as 19 deaths have been tabulated under the head of infirmity and old age; 3 deaths resulted from accidents, and there was one case of suicide; in 9 instances the cause of death was not specified.

Mercantile.

No. 4. Mercantile—includes bankers, merchants, brokers, general and army agents, public notaries, and all those persons, a large portion of whose time is occupied in counting-houses, &c. The deaths of persons of this class recorded on the returns for 1841 amounted to 129; on those for 1851 to 181; and on those received for the past decade to 265, being an increase of 84 on the number returned in 1851. Of the deaths returned in 1861, 24 were caused by epidemic diseases; 36 by diseases of the brain and nervous system; 34 by diseases of the circulating organs, 33 of which were from disease of the heart; in 70 in-

Amount and Causes, from the 30th of March, 1851, to the 7th April, 1861—continued.

stances diseases of the respiratory organs proved fatal, including 48 deaths from consumption; 20 deaths resulted from diseases of the digestive organs; 3 from those of the urinary organs; 4 deaths were attributed to rheumatism; 3 to gout; 2 each to cancer and inflammation unspecified; and I each to disease of bones and joints, fracture, ulceration, anthrax, mortification, and abscess; 36 deaths were ascribed to debility and old age; 5 persons were drowned, and 2 were otherwise accidentally killed; in 18 instances the cause of Mercantile. death was not specified.

SPECIAL

No. 5. Engineers and Architects—including also builders, land surveyors, measurers, &c. Engineers The number of deaths of persons of this class recorded on the Census returns for 1841, and Archiamounted to only 38; on those for 1851 the number returned was 132; and on the present occasion we have received a return of 150. Of these 150 deaths, 17 were caused by diseases of an epidemic or contagious character; 16 resulted from diseases of the brain and nervous system, and a like number from diseases of the circulating organs; 47 were attributed to diseases of the respiratory organs, nearly all of which were caused by consumption; and as many as 8, or 1 in 18.8 of the total, were violent or sudden.

No. 6. Unprofessional—consisting of persons of property or private means, and who sional

TABLE III .- RETURN of DEATHS for Dublin City, showing by Occupations their

SPECIAL
SANITABY
REPORT ON
DUBLIN
CITY.

Unprofessional.

Hotelkeepers. fatal in 6 instances (all males); 100 deaths were attributed to infirmity and old age; and in 8 instances the persons met with violent or sudden deaths.

No. 7. Hotel-keepers, Male and Female.—On the Census returns for 1861 have been recorded the deaths of 25 hotel keepers—viz., 22 males and 3 females; the disease to which most deaths (6) have been attributed being consumption. The disease next in amount was apoplexy, from which cause 3 males died. The number of deaths of this class of persons recorded on the returns for 1841 was only 4; on those for 1851 the number was 23.

resided chiefly in the first and second class streets and squares. In 1841 the deaths of

this class of persons returned as having occurred in the previous ten years amounted

to 283; in the returns for 1851 they numbered only 80; and on the present occasion

they are 450, or 252 males and 198 females. The class of diseases which proved most

fatal was that of the respiratory organs, to which cause were attributed the deaths of 128

persons of this class; 49 died from diseases of the brain and nervous system; gout was

First Class Shopkeepers. No. 8. First Class Shopkeepers—who had for the most part inhabited streets of the same denomination, afforded in 1841 a return of 85 deaths; in 1851 the number returned was 38; and in 1861 it was 42, or 31 males and 11 females. Eleven of these deaths resulted from consumption, and 6 from heart disease; 3 each from bronchitis and "old age"; and 2 each

Amount and Causes, from the 30th of March, 1851, to the 7th of April, 1861—continued.

from fever, apoplexy, paralysis, dropsy, and liver complaint. Any other disease causing death in this class of persons was represented by one.

No. 9. Second Class Shopkeepers, or those who had lived in streets of the same class, and also in the mixed streets and districts. The deaths of persons of this class returned on the Census forms in 1841, as having occurred during the preceding ten years, amounted to 1,064; in 1851 the number returned was 1,336, the sexes being in the ratio of 88.7 Second Class Shopfemales to 100 males. On the forms for 1861 we received a return of only 334 deaths among keepers. this class of persons, the sexes being in the proportion of 39.7 females to 100 males. Of these deaths, 36 were caused by epidemic and contagious diseases; a like number by diseases of the brain and nervous system; 29 persons died of disease of the heart; 131 deaths resulted from diseases of the respiratory organs; in 18 instances death was attributed to dropsy, and in 9 to liver complaint; 5 females of this class of persons died in childbed; 29 persons were returned as having died from infirmity and old age, and in 8 instances death was violent or sudden.

The following numbers include either particular trades, or certain sections of the Trades, &c. community, whose deaths were either increased or diminished by the locality in which they resided:-Digitized by Google

SPECIAL SANITARY REPORT ON DUBLIN CITY.

SPECIAL
SANITABY
REPORT ON
DUBLIN
CITY.
Tailors.

No. 10. Tailors.—According to the returns for 1841 their deaths amounted to 513; by those for 1851, to 644; and by those for 1861 to 570—71 of which were of females. Of these deaths 72, or 1 in every 7.9 were attributed to diseases of the epidemic class, 50 to diseases of the brain and nervous system, 35 to diseases of the circulating organs; and as many as 257, or nearly one-half, to diseases of the respiratory organs—the largest item (194) being consumption. Twelve males died from diseases of the urinary organs; in 46 instances (41 males and 5 females) death was attributed to infirmity, debility, and old age, and 7 males were drowned.

Workers in Metals.

No. 11. Workers in Metals of all descriptions, afforded a mortality of 632 for the decade ending in 1841; of 733 for that ending in 1851; and of 669, or 647 males and 22 females, for the period on which we now report. The class of discase to which most deaths were attributed was that of the respiratory organs, which afforded a return of 262; 100 deaths were caused by epidemic diseases, including 55 from fever; in 52 instances death was attributed to diseases of the circulating organs; the comparatively large number of 42 deaths was ascribed to diseases of the digestive organs, including 22 deaths from dropsy and 13 from liver complaint; 13 deaths were attributed to disease of the locomotive organs; in 67 instances, including 5 females, death was ascribed to infirmity, debility, and old age; and in no less than 22 instances did persons of this class meet violent or sudden deaths—the number returned under this head in 1851, was twenty.

Workers in Leather. No. 12. Workers in Leather.—Leathercutters, boot and shoe makers, saddlers and harness makers, &c., but not including the original manufacturers of that material, afforded a return in 1851 of 1,419 deaths, or 1,113 males and 306 females; the number returned on the present occasion amounts to 1,234, or 967 males and 267 females, the most fatal class of diseases being that of the respiratory organs, which caused death in 537 instances. The epidemic class of diseases proved fatal in 161 instances; 98 deaths occurred from diseases of the brain and nervous system, including 29 deaths from apoplexy and 28 from paralysis; 59 of these persons died from heart disease; in 49 instances, 29 males and 20 females, death was attributed to dropsy; and in 17 instances, (5 males and 12 females), to spine disease. In 108 instances, 90 males and 18 females, death was ascribed to infirmity, debility, and old age; and 25 of this class of persons met with violent or sudden deaths.

Workers in Wood.

No. 13. Workers in Wood—Carpenters, sawyers, cabinet-makers, &c. Deaths of this class of persons returned in 1841 amounted to 1,111; the number returned in 1851 was 1,197; and in 1861, 1,004, or 978 males and 26 females. Diseases of the zymotic or epidemic class proved fatal in 137 instances, including 78 deaths from fever; 86 deaths of this class of persons were caused by diseases of the brain and nervous system, the largest items therein being apoplexy (25) and paralysis (24); 68 deaths were attributed to heart disease, and 9 to other diseases of the circulating organs. In the class of diseases of the respiratory organs have been tabulated 393 deaths, or one in every 2.6 of the total deaths among this class of persons. The comparatively large number of 26 deaths was returned upon the forms as having been caused by liver complaint; in 90 instances death was attributed to infirmity, debility, and old age, and as many as 42 persons of this class met with violent or sudden deaths during the decade.

Workers in Stone. No. 14. Workers in Stone—Masons, bricklayers, stone-cutters, &c., afforded in 1841 a return of 406 deaths; in 1851, 477; and for the past decade 439, including 1 female. Of these, 47 were attributed to epidemic diseases. 43 to diseases of the brain and nervous system, 45 to those of the circulating organs, 162 to diseases of the respiratory organs, and 30 to those of the digestive, including 14 deaths from dropsy. Thirty-eight deaths were ascribed to infirmity, debility, and old age, and in 31 instances the deaths were either violent or sudden.

Workers in Glass.

No. 15. Workers in Glass.—Blowers, cutters, stainers, &c., afforded a return in 1841 of 30 deaths; in 1851, of 27; and on the present occasion of 31—27 males and 4 females; of these 31 deaths, 4 occurred from epidemic diseases; a like number from diseases of the brain and nervous system, and in 8 instances death was attributed to diseases of the respiratory organs.

Provision Dealers.

No. 16. Provision Dealers afforded a return in 1841 of 150 deaths; in 1851, of 226; and in 1861 an exactly similar number, the sexes being 135 males and 91 females. The class of disease in which most deaths have been tabulated is that of the respiratory organs, 94, the sexes being equally divided; in 34 instances death was attributed to infirmity, debility, and old age, and 4 of this class of persons met with violent or sudden deaths.

Agriculturists. No. 17. Agriculturists—Farmers, labourers, cattle-dealers, farm-servants, &c., &c. The number of deaths of this class of persons returned in 1841 amounted to 2,939; in 1851, to 5,630; and in 1861 to 4,179, or 4,057 males and 122 females. These deaths are distributed over nearly all the diseases specified in the tables. Deaths from diseases of the zymotic class number 756, in which are included 14 from small-pox; 328 deaths resulted from diseases of the brain and nervous system, including 76 from apoplexy, and 86 from paralysis; and as many as 10 were attributed to lockjaw; 226 deaths

resulted from disease of the heart, and 25 from other diseases of the circulating organs; in 1.576 instances death was attributed to diseases of the respiratory organs, being 1 in 2.7 of the total deaths of this class of persons; 295 deaths were ascribed to diseases of the digestive organs, including 131 from dropsy, and 63 from liver complaint; 90 deaths resulted from diseases of the urinary organs; in 93 instances death was caused by diseases of the locomotive organs, including 26 cases of spine disease; 49 deaths were Agriculturally and the state of the locomotive organs, including 26 cases of spine disease; 49 deaths were agriculturally and the state of the locomotive organs, including 26 cases of spine disease; 49 deaths were agriculturally and the state of the locomotive organs, including 26 cases of spine disease; 49 deaths were agriculturally and the state of the locomotive organs, including 26 cases of spine disease; 49 deaths were agriculturally and the state of the locomotive organs, including 26 cases of spine disease. attributed to cancer, and 295 to infirmity, debility, and old age. In as many as 130 turists. instances, persons of this class met with violent or sudden deaths, including 3 cases of suicide, a number similar to that returned in 1851.

SPECIAL Sanitaby REPORT OF DUBLIN CITY.

No. 18. Artists of all descriptions, including portrait painters, and also inspectors of Artists. schools, teachers of different descriptions, editors, musicians, &c. The number of deaths of this class of persons returned in 1841 amounted to 130; in 1851, to 267; and in 1861 to 319, of whom 87 were females. Of these 319 deaths, 40 were from epidemic diseases, including 24 from fever and 6 from dysentery; 30 deaths were attributed to diseases of the brain and nervous system; 23 to heart disease; 145 to diseases of the respiratory organs, including 106 from consumption; 30 deaths were attributed to infirmity, debility, and old age; and in 4 instances persons of this class met with violent or sudden deaths.

No. 19. Clerks of all descriptions. Deaths of this class of persons, according to the Clerks returns in 1841, amounted to 635; by those for 1851, to 803; and by those for the past decade, to 964. Of these 964 deaths, 134 occurred from epidemic diseases; 105 from diseases of the brain and nervous system; 56 from heart disease; 319, or one-third of the total, from consumption; 29 from dropsy; 21 from liver complaint, and 7 from diseases of the urinary organs. In 58 instances death was attributed to old age; and in as many as 34 instances death was stated to have been violent or sudden, including 1 case of suicide.

No. 20. Chemists and Druggists.—The number of deaths returned in 1841 amounted to Chemists 18; in 1851, to 10; and in 1861 to 24; 9 of which resulted from diseases of the respiratory and Drug-

organs; 4 from epidemic diseases; 2 from liver complaint, &c.

No. 21. Chemical Trades.—Chandlers, soap-boilers, bleachers, dyers, blacking makers, Chemical workmen in vitriol manufactures, &c. The number of deaths of persons of this class Trades. returned in 1841, amounted to 121; in 1851, to 154; and in 1861, to 92, or 82 males and 10 females. Of these 92 deaths, 5 were attributed to epidemic diseases; 11 to diseases of the brain and nervous system; 5 to heart disease; and 47, or more than one-half, to diseases of the respiratory organs. In 12 instances death was attributed to old age; and 2 persons met with violent or sudden deaths. There have not been any deaths of persons of this class returned for diseases of the digestive organs.

No. 22. Carvers and Gilders—persons exposed to the action of mercury, &c. In 1841 Carvers and the deaths returned for this class amounted to 35; in 1851 they amounted to 27; and in 1861, to 29, 23 males and 6 females; of which number 12 were from diseases of the respiratory organs, including 9 deaths from consumption, and 3 were from paralysis.

No. 23. Hatters, hat trimmers, &c. The deaths of this class of persons returned in Hatters. 1841, amounted to 87; and in 1851, to 91. Upon the present occasion we have to report on 71, 52 males and 19 females. 16 of these were attributed to epidemic diseases; 4 to dropsy, and 30 to diseases of the respiratory organs, including 25 deaths from consumption.

No. 24. Painters and Glaziers, glue and size makers, paper-stainers, &c. On the Painters and returns for 1841 were recorded the deaths of 291 of this class of persons; on those for Glaziers. 1851, 364; and on those for 1861, 324, of which 43 were caused by diseases of the epidemic class, including 24 deaths from fever; 41 by diseases of the brain and nervous system; 23 by heart disease; 83 by consumption, and 34 by other diseases of the respiratory organs; 17 deaths were attributed to dropsy, and 9 to colic, a disease peculiar to some of this class of persons. In as many as 13 instances the deaths were violent or sudden, of which 5 were caused by drowning, 2 by injuries of the head, 5 by other accidental injuries, and 1 was a case of suicide.

No. 25. Printers.—The deaths of this class returned in 1841, amounted to 103; in 1851, Printers. to 110; and in 1861 to 161, of which number 29 were caused by epidemic diseases; 8 by diseases of the brain and nervous system; a similar number by heart disease; 63 by consumption; and 5 by dropsy. Fifteen deaths were attributed to infirmity and old age; and 4 of this class of persons were drowned.

No. 26. Tanners, including curriers and skinners. The number of their deaths Tanners. returned in 1841 amounted to 104; in 1851, to only 31; and in 1861, to 55, of which number 11 were caused by epidemic diseases; 8 by diseases of the brain and nervous system; 5 by heart disease, and 12 by consumption. In 5 instances the deaths were violent or sudden.

No. 27. Tobacconists, Snuff-grinders, and Tobacco-twisters.—Deaths of this class of persons Tobaccoreturned in 1841 amounted to 44; in 1851, to 47; and the number returned in 1861 nists. was 40, of which 4 resulted from fever, and 13 from consumption. In 2 instances death was violent or sudden.

SPECIAL
SANITARY
REPORT ON
DUBLIN
CITY.

Dressmakers. No. 28. Dressmakers—including seamstresses of all descriptions, as well as straw-bonnet makers, cap-makers, &c.—The returns for 1841 afforded 700 deaths of this class of persons; those for 1851 as many as 1,353; and those for the past decade 1,121, of which number 462, or 1 in 2.4 of the total, were from consumption,—the number of deaths ascribed to this disease on the returns for 1851 was 443, or 1 in every 3.1 of the total deaths of this class of persons during the previous ten years. 179 deaths resulted from diseases of the epidemic class; 38 from diseases of the brain and nervous system; 61 from heart disease; 68 from bronchitis; 57 from dropsy; 21 from liver complaint; 27 persons of this class died in childbed; in 48 instances death was attributed to infirmity, debility, and old age; and in 9 instances, persons of this class met with violent or sudden deaths, including 1 case of suicide.

No 200 Private and a suffectioners. The number of deaths of this class of persons.

Bakers.

No. 29. Bakers, cooks, and confectioners.—The number of deaths of this class of persons returned in 1841 amounted to 161; in 1851, to 259; and in 1861, to 257—200 males and 57 females, 36 of which were attributed to diseases of the epidemic class; 17 resulted from diseases of the brain and nervous system, and the proportionately large number of 115 from diseases of the respiratory organs. In 4 instances the deaths were of a violent or sudden nature.

Butchers.

No. 30. Butchers, poulterers, and victuallers.—191 deaths in 1841, 133 in 1851, and 152 in 1861, 15 of which resulted from fever, 9 from apoplexy, 41 from consumption, and 7 from diseases of the digestive organs. The deaths of 12 of this class of persons were attributed to debility and old age, and in 5 instances (including 1 case of suicide) the deaths were violent or sudden.

Weavers.

No. 31. Weavers and spinners, cloth-workers, dressers of silk, woollen, or cotton thread, lace makers, and factory workers—The number of deaths of this class of persons returned in 1341 amounted to 712, in 1851 to 638, and in 1861 to only 398—208 males and 190 females. Of the deaths returned in 1861, epidemic diseases caused 57, and those of the brain and nervous system 34, including 11 deaths from apoplexy and 9 from paralysis; 17 deaths were attributed to heart disease, 81 to consumption, 19 to dropsy, 78 to infirmity, debility, and old age; and in 6 instances the deaths were violent or sudden.

Other Trades, first-class. No. 32. Other Trades, first-class—not included in the foregoing—such as optical and mathematical instrument makers, watch and clock makers, gold and silver smiths, engravers, seal cutters, modellers, pattern designers, &c. Their deaths amounted, according to the returns for 1841, to 169; by those for 1851, to only 47; and the number returned on the forms for 1861 was 104. The class of diseases which caused the greatest number of deaths was that of the respiratory organs, which proved fatal in 39 instances.

Other Trades, second-class. No. 33. Other Trades, second-class, include all those occupations not specified in the foregoing, such as pipe-makers, hair-dressers and barbers, mat, toy, sail, umbrella, bellows, comb, and brush makers, also millers and barm makers. Their deaths amounted to 317 in 1841, to 218 in 1851, and on the present occasion to 265, or 219 males and 46 females. The class of diseases which proved most fatal was that of the respiratory organs, which carried off 118.

Washerwomen. No. 34. Washerwomen—whose deaths were returned on the Census forms, for 1841 amounted to 123, on those for 1851 to 227, and on those for 1861 to 354; of which number 82 were from diseases of the epidemic class. Of the other diseases the most fatal to this class of persons were consumption, bronchitis, dropsy, and inflammation of lungs. In 32 instances death was attributed to debility and old age; and 1 death was returned as having been caused by starvation.

First-class Servants. No. 35. First-class Servants—the domestics of residents in first and second-class private streets and first-class shop streets afforded, where death took place in these localities, a return of 160 in the Census returns for 1841, 194 in those for 1851, and in those for 1861, 216—120 males and 96 females, the principal causes of death being diseases of the respiratory organs, which proved fatal in 93 instances, and heart disease, which caused death in 19; 8 of this class of persons, 4 males and 4 females, met with violent or sudden deaths.

Second-class Servants. No. 36. Second-class Servants—the domestics of the occupants of second-class shop and mixed streets. In 1841 the number of deaths returned was 351, in 1851 it was 370, and on the present occasion it is 331—160 males and 171 females. The diseases which proved most fatal during the past decade were consumption, disease of the heart (30), bronchitis, dropsy, and fever; in 54 instances death was attributed to infirmity, debility, and old age; and in as many as 22 instances—13 males and 9 females—death was violent or sudden.

Third-class Servants. No. 37. Third-class Servants—who resided in the different wards or districts—afforded a return of 1,099 deaths in 1841; in 1851 the number returned was 926, and in 1861, 824, or 432 males and 392 females. The diseases which proved most fatal to this class of servants during the recent decade were consumption, heart disease, fever, bronchitis, asthma, dropsy, and apoplexy—being somewhat similar in their order to the diseases causing death in the second class of servants; and in 92 instances death was attributed to infirmity, debility, and old age. In 22 instances the deaths were violent or sudden; a number

similar to that for the second class of servants, but the sexes were 19 males and 3 females.

No. 38. Servants in Hospitals and Workhouses—not merely attendants in these institutions, but servants from the different localities of the metropolis. The deaths of this class of persons returned upon the Census forms for 1841 amounted to 2,391, on those for 1851 to 5,033, and on those for 1861 to 3,624, or 779 males and 2,845 females. The principal Servants in causes of death were consumption, bronchitis, fever, dropsy, and dysentery. In 156 Hospitals. instances, deaths of this class of persons were attributed to infirmity, debility, and old age; 41 deaths have been tabulated as violent or sudden, including 12 from wounds, 10 from burns and scalds, 1 from drowning, 9 from injuries of the head, 2 from starvation (most probably those persons arrived at the institutions in a prostrate condition), 3 cases of suicide, I death from accidental poisoning; and 3 instances in which the particular description of accident that caused death was not specified.

SPECIAL

SANITARY REPORT ON

DUBLIN

CITY.

No. 39. Persons who by their occupations are more than ordinarily Exposed to the effect Persons exof Weather;—such as car and coach drivers and guards, letter-carriers, lamp-lighters, water-posed to carriers, and news-venders. The deaths in this class during the decade ending in 1841 weather. amounted to 278, in that ending in 1851 to 599, and in that ending in 1861 to 436—418 males and 18 females. Diseases of the epidemic class proved fatal to 49 of these persons, brain diseases to 40, and heart disease to 35; 97 deaths were caused by consumption, 35 by bronchitis, and 21 by dropsy; in only 30 instances was death attributed to old age; the large proportionate number of 24 deaths were violent or sudden. The number of deaths of these persons returned under the heading "Violent or Sudden" in 1851, was 27.

No. 40. Police—including the metropolitan force and such of the Constabulary as died Police. in hospital. The deaths of this class of persons during the decennial period ending 30th March, 1851, amounted to 126, and during the ten years upon which it is now our duty to report to 203, of which number 45 were from epidemic diseases; 12 from diseases of the brain; consumption afforded a return of 62 deaths; bronchitis, 6; inflammation of lungs, 13, and fracture, 3. Four of those persons met with violent or sudden deaths, including 1 from wounds, 2 from accidental causes unspecified, and 1 case of suicide.

No. 41. Sailors.—Afforded 132 deaths in 1841; in 1851 the number was 178, and on Sailors. the present occasion, 242, including the large item of 66 deaths classed as violent or sudden, of which 43 were from drowning. The diseases most fatal to this class of persons

were consumption, fever, disease of the heart, and inflammation of the lungs.

No. 42. Coalporters.—The returns for 1841 afforded 14 deaths; those for 1851, 41; and Coalporters. those for the past decade, 72, and include 22 deaths from diseases of the respiratory organs, 9 from epidemic diseases, 8 from heart disease, and 3 from dropsy. In as many as 15 instances persons of this class met with violent or sudden deaths.

No. 43. Chimney Sweepers.—Nine deaths were returned in 1841; 15 in 1851; and 25 Chimney in 1861, comprising 8 from epidemic diseases; 9 from diseases of the respiratory organs; Sweepers. and 2 attributed to cancer.

No. 44. First-class Families—including the wives, children, and visitors of the occu-First-class pants of first and second-class private streets, and first-class shop streets; 2,293 deaths of Families. this class of persons were recorded on the returns received in 1841; the number returned in 1851 was 1,927; and on the present occasion it is 1,666, or 639 males and 1,027 females, and includes the following:—epidemic diseases, 312, the largest item therein being scarlatina (98); diseases of the brain and nervous system, 281; heart disease, 56; consumption, 229; bronchitis, 74; marasmus or infantile decay, 46; dropsy, 28. females of this class died in childbed; in 247 instances death was attributed to infirmity, debility, and old age, and in 37 instances the cause of death was violent or sudden.

No. 45. Second-class Families—inhabiting the second and third-class shop streets and Second-class the mixed streets. The number of deaths returned in 1841 amounted to 7,520; in 1851 Families. to 9,504; and on the present occasion to 8,422, or 3,603 males and 4,819 females. Epidemic diseases proved fatal to 2,101 of this class of persons, the sexes, 1,068 males and 1,033 females; 1,703 deaths resulted from diseases of the brain and nervous system, including those of 855 children, who died from convulsions, and of 645 from water on the brain; 173 deaths were attributed to disease of the heart; consumption carried off 974; bronchitis, 290; inflammation of the lungs, 184; dropsy, 157; marasmus or infantile decay, 789; 101 females died in childbed; rheumatism proved fatal in 24 instances-6 males and 18 females; cancer in 51—46 females, and 5 males; and as many as 710 deaths were attributed to debility, infirmity, and old age. Six of this class of persons died from wounds; 46 from burns and scalds; 24 were drowned; 1 male died from the effects of intemperance; 3 males from accidental poisoning; one death was a case of homicide; and in 62 instances the causes of death were accidents, of which the precise description was not stated in the returns.

No. 46. Third-class Families—are those of the different tradesmen and other occu-

SPECIAL
SANITABY
REPORT ON
DUBLIN
CITY.

Third-class Families. pants of the various wards or districts, the great proportion of the adults of which have been already specified in some of the foregoing entries—they consist of the poorest of the population, and inhabit the most unhealthy localities.

The returns for 1841 afforded a total of 21,708 deaths of this class of persons; those for 1851, 24,157; and those for the past decade 19,891, or 9,148 males and 10,743 females. Diseases of the epidemic class proved fatal in 6,173 instances, including the large numbers of 730 from small-pox, and 1,579 from scarlatina; 4,592 deaths resulted from diseases of the brain and nervous system; heart disease proved fatal to 411 persons; consumption to 1,949; bronchitis to 315; dropsy to 345; marasmus or infantile decay to 1,933; 154 women of this class died in childbed, and 5 died of cancer of the womb; in 989 instances death was attributed to infirmity, debility, and old age; violent or sudden deaths amounted to 429, of which 173 were from burns and scalds, 11 from wounds, 56 from drowning, 2 were returned as from starvation, and 166 were instances in which the cause of death was stated to be accidental, but the particular kind of accident was not specified.

Lodgers.

Nos. 47, 48, and 49 are the first, second, and third-class Lodgers, who resided in the first-class shop streets, the second and third-class shop and mixed streets, and the different wards or districts. They principally consisted of strangers or visitors from the country, and their deaths amounted according to the returns for 1841 to 1,162; by those for 1851 to 637; but according to these for 1861 to only 61.

Occupations unspecified.

Occupations Unspecified.—The number of deaths recorded on the various Census forms for the City of Dublin, in the returns of which the occupations of the deceased were not stated, amounted, on the forms for 1841, to 16,873; on those for 1851 to 12,894; and on those for 1861 to 12,945, or 5,413 males and 7,532 females (children inclusive). Of this number 2,879 were from epidemic diseases, including 1,238 deaths from fever; diseases of the brain and nervous system proved fatal in 1,184 instances; heart disease in 254; diseases of the respiratory organs in 3,061, including 1,211 from consumption and 779 from bronchitis; 747 deaths were attributed to marasmus or infantile decay; 120 to diseases of the urinary organs; 235 women, whose occupations were not specified, died in childbed; in 561 instances death was assigned to debility, infirmity, or old age; 528 deaths have been tabulated as violent or sudden, in which are included 70 cases of suicide—the number returned in 1851 being 59; thereby showing an increase of 11 from that cause in a diminished population. The number of "still-born" registered under this head in 1861 was 1,139, or 647 males and 492 females, against 1,626 in 1851, at which period the sexes were 974 males and 652 females.

Tabular arrangement of Deaths in Dublin City.

The Table on page 75 has been prepared for the purpose of showing the number of persons of the several classes of occupations just treated of, whose deaths were returned on the A Forms or Family Schedules, on Hospital Forms, and on those for Workhouses:—

From this it will be seen that of the total (63,715) deaths afforded by the Census forms as having occurred in the City of Dublin during the decade ending April the 7th, 1861, there were returned on the family schedules 40,673, or 63.8 per cent. of the total, the sexes being 21,380 males and 19,293 females,—or in the proportion of 90.2 of the latter to 100 of the former; that the number of persons who had availed themselves of hospital accommodation, and died in these institutions, was 10,610, or 16.7 per cent. of the total deaths in the city, the sexes being 6,175 males and 4,435 females—or in the proportion of 71.8 of the latter to 100 of the former (but of these a large proportion came from the country); and that the number of deaths in the workhouses situated in the City of Dublin amounted to 12,432, or 19.5 per cent. of the total deaths in the city, the sexes being 5,612 males and 6,820 females—or in the proportion of 82.3 of the former to 100 of the latter.

The number of deaths returned as having occurred in the City of Dublin during the decennial period ending on 30th March, 1851, was 73,982, or 38,596 males and 35,386 females—being in the proportion of 91.7 of the latter to 100 of the former.

Burials in Dublin City and its vicinity. THE BURIALS IN THE CEMETERIES AND GRAVEYARDS OF DUBLIN CITY.—The Census Commissioners for 1841 obtained a return of the burials which took place from 7th June, 1839, to the 6th June, 1841, in the three great cemeteries in the vicinity of the City of Dublin—namely, Richmond, Glasnevin, and Harold's-cross; in Drumcondra churchyard and St. George's burial-ground; also, in 18 graveyards within the city boundary. By this return it was found that the burials during that period amounted to 13,516—6,835 males and 6,681 females. The Commissioners for 1851 instituted a similar inquiry for the period extending from the 6th June, 1841, to the 30th March, 1851, and in their report upon the results, after a diligent and lengthened search amongst ancient records appertaining thereto, entered very minutely into the subject, and presented, at page 504, of their Report on Tables of Deaths, an exact copy of a "Yearly Bill" of mortality for the city and suburbs of Dublin, ending the one and twentieth of March, 1683-4. This curious

"Bills of Mortality."

Table showing the Deaths in the City of Dublin, arranged by Occupations and Localities.

\* NOTE.—Rutty's year ended in March; the Dublin Bill of Mortality Year then ended 22 December.

Digitized by 200916

SPECIAL SANITARY REPORT ON DUBLIN CITY.

Burials.

Following up an annual return of the burials, the earliest period we are enabled to commence with is the year 1840, from which date returns have been received of all the burials which have taken place in the several cemeteries and graveyards mentioned in Table I. on the opposite page.

The number of those persons who were interred in these places, but who did not reside within the City of Dublin at the time of their demise, may be fairly represented by one-

eighth of the total.

Annual Number of Interments in the various Cemeteries and Graveyards in Dublin City and its Immediate Vicinity, from 1840 to 1860, both inclusive.

Fluctuation

From this statement we learn that the year 1849 was that in which the largest number of Mortality. of burials (14,488) took place—a fact to be accounted for by the visitation of cholera, in addition to other epidemics and general distress at that time. The year in which the next largest number of burials (13,247) took place was 1847—a year noted in the annals of Ireland as one of great suffering, consequent on the potato failure of the previous year. The years in which the least number of persons were buried in these places, during the whole period over which the return extends, were 1840 and 1843; the annual average for the 10 years ending in 1850 being 9,210. Confining our observations, however, to the last 10 years set forth in the table, we find that the year 1854 was the most fatal, and 1857 the least so; the annual average for the decennial period being 8,627. If from this we deduct 1,078 (or one-eighth) to represent those of the interred who had not resided in the city at the time of their death (allowing for the few persons who, although they died in the city, were not interred in any of the burial grounds included in our tables), we have a remainder of 7,549, being equal to 1 in every 34 of the population found in the city when taking the Census in 1861. It must be borne in mind that in this estimate the deaths which occurred in workhouses and hospitals are included, a fact which unduly raises the rate of mortality; for although persons of this class who died there formed a portion of the population, nevertheless in the workhouses they were in many instances composed of those who had resided in the rural district, and had become impoverished and debilitated before they sought shelter within these institutions; and doubtless, many of those who died in hospitals had also been received from the rural districts.

Sexes.

With regard to the sexes, the following is the result afforded by the above list of burials: For the ten years ending in 1850 the proportion was 96.2 males to 100 females; for the following ten years ending in 1860 it was 94.6 males to 100 females; and for the twenty years it was 95.4 males to 100 females.

Interments within the City.

The number of burials returned to the Census Commissioners in 1851, as having taken place within the municipal boundary of Dublin city, from the 6th June, 1841, to the 30th March, 1851, was 11,143--5,398 males and 5,745 females; of which number, 867 were persons who had died without the boundary of the city, but in the vicinity thereof; 37 were from counties beyond the circle of the county of Dublin, and 7 were brought from other The number returned to us from the intramural burial grounds for the past decade is only 5,693, or 2,727 males and 2,966 females; of which number, 487, or 208 males and 279 females, died outside the municipal boundary; 62, or 30 males and 32 females, in other counties in Ireland; and 27, or 23 males and 4 females, died in other countries (the majority of those, thus tabulated, were mariners who belonged to colliers and other coasting vessels frequenting the port of Dublin, the name of the port to which the vessel belonged having been, in each instance, inserted on the return as that of the place of abode of the deceased).

The following Table shows the number of burials which took place during the decade in each of the several grave-yards and vaults within the municipal boundary of Dublin,

and in certain cemeteries and burial-grounds in the immediate vicinity thereof.

From this Table it will be seen that the parochial grave-yard in which the largest number of interments took place during the decade, was that of St. James, in which there were 818 persons buried, including 536 paupers who died in the South Dublin Union

Workhouse; in the church-yard of St. Mark's parish, there were buried 590; in St. Interments Catherine's, 584; and 573 in St. Nicholas Without. During that portion of the year within the 1851 included within the decade on which it is our duty to report, the remains of a Provost of Trinity College were deposited in the vaults of that institution. There were not any interments in St. John's church-yard during the decade.

The following statement exhibits the number of interments in the burial-grounds outside Interments the city boundary, from 30th March, 1851, to 7th April, 1861, classified according to the City Boundary in which the decreased persons had resided at the time of their death. localities in which the deceased persons had resided at the time of their death:-

Burials in the City of Dublin and its vicinity. Of the 86,306 burials returned for the past decade, 10,635 were of persons who had not resided within the city of Dublin at the time of their decease; deducting this number from the total, we find 75,671 which represents the number of those who resided within the city at the time of their death. The number of deaths returned upon the family schedules and other forms devised for the purpose of collecting a return thereof, is 63,715, being a deficiency, when compared with the burial returns, of 11,956, a much greater deficiency than was exhibited between these two classes of returns in 1851, at which period the difference was only 6,130.

The proportion of the sexes was found, according to the returns of deaths received upon the family schedules, &c., to be 92.1 females to 100 males; whereas according to the burial returns, the sexes of the persons who died within the city of Dublin, were in the proportion of 106.2 females to 100 males, being a difference of 14.1. A similar

in the City and Suburbs of Dublin, from the 30th March, 1851, to the 7th April, 1861—continued.

disparity in the returns as regards sexes, was noticed in the Tables for 1851, and was Burials in accounted for in the following manner:—"Possibly the circumstance that while a woman the City of bur the loss of her husband becomes localized a man by the loss of his wife is more likely."

Dublin and by the loss of her husband becomes localized, a man by the loss of his wife is more likely its vicinity. to emigrate or change his locality; and that thus when [in 1851] an inquiry was instituted into the deaths of the previous ten years, there were more females to answer the query than males."

Table II. on the foregoing pages shows the number of burials by diseases and sexes, in each month and year in the cemeteries, grave-yards, and church vaults in the city and suburbs of Dublin, from the 30th March, 1851, to the 7th April, 1861. It is to be regretted that in 36,609 instances the cause of death was not specified; comparing, however, the deaths returned from each class of diseases with the total of those deaths for

REPORT ON TABLES OF DRATHS.

Burials in the City of Dublin and its vicinity. which the causes were assigned, we find that the ratio of the epidemic class to the total was 1 in every 5·3, the largest items included therein being scarlatina (1,999), fever (1,727), measles (1,249), and hooping-cough (1,207); diseases of the brain and nervous system bore the ratio of 1 in 8·5; disease of the heart, 1 in 35·3; and diseases of the respiratory organs, 1 in 3·5,—the largest item included therein being consumption, to which were ascribed 9,937 deaths, being equal to 1 in 5 of the total deaths from specified causes recorded on the burial returns.

Table III. gives the burials by ages, sexes, and diseases, by which it will be seen that the number returned under one year old amounted to 14,630, or 17.5 per cent. of the total at specified ages, the sexes being in the proportion of 82.7 females to 100 males; the number returned 1 year old and under 5 was 14,170, or 16.9 per cent. of the total at specified ages, the sexes being in the proportion of 96.5 females to 100 males; the number returned 5 years old and under 20 was 9,084, or 10.8 per cent. of the total at specified ages, the sexes being in the proportion of 97.1 males to 100 females; the number returned 20 years old and under 40 was 13,065, or 15.6 per cent. of the total at specified ages, the sexes being in the proportion of 92.4 males to 100 females; the number 40 years old and under 60 was 14,696, or 17.5 per cent. of the total at specified ages, the sexes being in the proportion of 92.9 males to 100 females; the number 60 years old and under 80 was 14,956, or 17.9 per cent. of the total at specified ages, the sexes being in the proportion of only 76.6 males to 100 females; the number 80 years old and upwards was 3,141, or 3.8 per cent. of the total at specified ages, the sexes being in the proportion of only 60.4 males to 100 females; in 2,564 instances the ages were not specified, the proportion of the sexes being equal.

Monthly and daily average of Burials. Table IV. shows the number of burials from 1841 to 1861; the average per month and per day for the decade ending in 1851, and for that ending in 1861; also the monthly and daily averages for the whole period given in the Table.

TABLE IV:—Showing, by Months, the Number of Burials during the decades ending in 1851 and 1861 respectively; also the total number during the two periods—with the average number of Burials in each Month and on each Day.

| Total, .  | 44,832   | 46,679   | 91,511   | 777  | 25.5  | 41,996   | 44,310   | 86,306   | 718  | 23.6  | 86,828   | 90,989   | 177,817  | 747  | 24   |

The average number of burials daily during the twenty years was 24.6, varying from 25.5 for the decade ending in 1851 to 23.6 for that ending in 1861. The months of July and August were the most healthy, the average number of burials daily being only 21.1 for the former, and 21.9 for the latter; the most fatal months were February and March, during which the average number of burials daily was 27.9. During the month of May the burials were 24.6, being exactly the daily average for the entire period. Dividing the year into two periods, one consisting of the months of June, July, August, September, October, and November, and the other comprising the months of December, January, February, March, April, and May, we find that the average daily number of interments during the former period was 22.3, and during the latter, 26.8.

Conclusion.

In concluding this our Report on the Deaths recorded on the various Census Forms designed for the purpose of obtaining a return of mortality in Ireland during the ten years ending 7th April, 1861, we beg to congratulate your Excellency upon the freedom from epidemic pestilence which the country has enjoyed throughout the period over which our inquiries extended; and also upon the fact that Ireland is now no longer without the advantage of a General Registration of Deaths—measures for the Registration of Births and Deaths (26 Vic., cap. 11), and of Marriages (26 and 27 Vic., cap. 90), having

been passed during the last Session of Parliament, which came into operation in the Conclusion. beginning of the present year—and to the successful carrying out of which we trust the endeavours made by the Commissioners to arrive at a proximate result in the Censuses of 1841, 1851, and 1861 may prove of much assistance.

We have the honour to be

Your Excellency's

Very faithful servants,

WILLIAM DONNELLY, Registrar-General, Chief Commissioner.

WILLIAM R. WILDE, GEORGE W. ABRAHAM, Assistant Commissioners.

HENRY WILKIE, Secretary.

Census Office, Dublin, 1861.

It is earnestly requested that the Heads of Families will see that the Answers to the several Queries contained in these Tables are distinctly and correctly given, since upon the accuracy of the answers the value of the Census must mainly depend. The information will be published in General Abstracts, only, and strict care taken that the Returns are not used for the gratification of curiosity, or any other object than perfecting the Census.

The Enumerator, on receiving the Returns, is on no account to permit them to be inspected by any person, except the Officer of the District, to whom he is instructed to deliver them without delay, in order that they may be transmitted to the Census Office. The Returns will, of course, be considered by the Officer as strictly confidential.

## INSTRUCTIONS FOR FILLING THESE TABLES.

The Enumerator will call for this Return as soon as possible after the night of the 7th of April, when he will assist such persons as may not be able to fill it themselves. But when competent, it is requested that the Head of the Family shall fill, or cause it to be filled, immediately after the said night, in order that the Enumerator may not be delayed when he calls for it.

This Return is divided into Three Tables.

THE 1ST TABLE is for those persons of each Family, the Visitors, and Servants, who slept or abode in the same house on the night of Sunday, the 7th of April.

By a "Family" is meant either one person living on his or her own means of support, or several persons united under one head, and having a common means of support;—therefore when there are several Families in one house, the Enumerator will leave a separate Form for each.

Religious Profession.—To prevent errors, and in order that each individual may be correctly enumerated, under this head, it is particularly requested that Protestants, who are members of the United Church of England and Ireland shall describe themselves as of the "Established Church," that members of the Roman Catholic Church shall describe themselves as "Roman Catholics," and that Protestants of the Presbyterian Church shall use the word "Presbyterian" opposite to their respective names. Individuals belonging to any other Religious Denomination or Sect are requested to describe themselves by that particular name or title by which they are most generally known.

OCCUPATIONS.—In order to arrive at a correct classification of the employments of the people, attention is requested to the following observations:—

One general principle which should be kept in mind is, that each person will be best described to whose name is annexed his or her principal means of support: thus, "Landed Proprietor,"—"House Owner,"—"Fund" or "Stock Holder,"—"Annuitant," &c., will best define the more independent classes, whose principal means are derived from any of these or similar sources.

Professions.—A person deriving his income from a profession should state its particular nature; and professional men who are occupied with other avocations, should define them. Clergymen of every religious denomination should be described according to their Rank and Station; Barristers and Attorneys, whether they practise; Medical Men, what branch of the profession they follow; Military and Naval Officers, retired from the service, should give their rank, also adding the terms "Retired Officer;" Artists to mention the particular Art which they pursue.

Approved,
EDWARD CARDWELL.

Merchants should state the particular trade in which they are engaged, and Shopkeepers are to observe the same rule. In reference to writing Clerks, it is desirable that the description should show the nature of the office, as "Clerk in Public Office,"—"Law Clerk,"—"Clerk in Corn Merchant's Office," &c.

Manufacturers, Tradesmen, and Apprentices.—The particular branch of Manufacture with which each is connected should be stated: thus, a weaver of silk should be distinguished from a weaver of any other kind of material, by describing him as a "Silk Weaver;" in a similar manner a "Woollen Weaver," a "Linen Weaver," &c. This rule is to be also observed with respect to every other trade: as "Brass Founder," or "Iron Founder,"—"House Carpenter," or "Ship Carpenter," —"House Painter," &c.

Servants and Labourers employed in Agricultural Works should be distinguished from those occupied in other ways, by stating the particular kind of Work in which each individual is usually engaged, as "Ploughman;" "Farm Labourer;" "Drainage Labourer;" "Mason's Labourer;" "Railway Labourer," &c.; and in the case of Household Servants, by giving their particular occupations.

EDUCATION.—In addition to the elementary acquirements in the English Language asked for under this head, information is also sought for with regard to the *Irish Language*, in order to ascertain the localities where, and the number of persons by whom, it is now spoken.

DEAF AND DUMB, OR BLIND.—Particular inquiry is made as to the number and condition of the Deaf and Dumb, and the Blind, in the hope that public attention may be more strongly directed to the wants of the poorer classes in Ireland who are thus afflicted. Those persons only are to be returned as Blind, who are quite deprived of sight.

THE 2ND TABLE is necessary in order to ascertain the number of persons belonging to each family, whether present or absent on the night of the 7th April. The absent members, if in Ireland, will of course be accounted for in the General Enumeration for the houses where they may happen to pass that night.

THE 3RD TABLE is for a Return of those persons who have Died while residing with this Family, during the last Ten years. The necessity for this is caused by the want of a General Registration of Deaths in Ireland, and consequently a defect of information for various objects useful to the community. This Table, however, will only show the Deaths which have occurred during the last Ten years in these families now living in Ireland.

WILLIAM DONNELLY,

Registrar-General.

It is particularly requested that this Return may not be soiled or in any way injured.

When the Members of a Family are too numerous for one Form, two or more will be supplied.

 <sup>(</sup>a) On the return from the Workhouse of Carlow it is stated that in 481 instances—221 males and 260 females—the cause of death was not recorded.
 (b) The return from the Workhouse of Kilkenny includes 200 deaths, without specifying sexes or ages. The Master states that the leaves of the Record Best from 18th September, 1852, to 24th March, 1853, have been torn out. No registry of the cause of death was kept prior to the Spring of 1853.
 (c) The return from Edenderry Union Workhouse does not specify the cause of death in 248 instances—142 males and 106 females. The Master states he has mercord of the cause of death for 1851, 1852, or the Spring of 1853.

Digitized by Google

and Causes of Death, from the 30th March, 1851, to the 7th April, 1861, so far as they have been returned the Medical Attendants-continued.

 <sup>(</sup>d) The r. turn from the Workhouse of Tuliamore does not specify the cause of death in 467 instances—238 males and 249 females—which occurred in 1851, 1852, and the Spring of 1853.
 (e) The return from the Workhouse of Ardee is deficient as to cause of death in 290 instances—145 males and 145 females; the Master states he has no record of the causes of deaths which occurred prior to the Summer of 1853. [continued at page 84.

TABLE I .- DEATHS in WORKHOUSES and WORKHOUSE HOSPITALS, -showing, by Localities, the Number, Amount, by the Masters of Workhouses and

 <sup>(</sup>f) It is stated on the return from Drogheda Union Workhouse that, with regard to 476 deaths—271 males and 205 females—which occurred prior to the Winter of 1853, the cause of death is not recorded.
 (g) The return from the Workhouse of Athlone is deficient as to cause of death in 479 instances—221 males and 258 females; the Master states that no record, as to the cause of death, was kept prior to the Autumn of 1853.

and Causes of Death, from the 30th March, 1851, to the 7th April, 1861, so far as they have been returned the Medical Attendants-continued.

LEINSTER—continued.

(A) The return from Gorey Union Workhouse is deficient as to the cause of death in 348 instances—168 males and 180 females—which occurred in 1851, 1852 and the Spring of 1853.
 The total, 45,1/7 deaths, returned from the Workhouses and Workhouse Hospitals of the province of Leinster, contains, in addition to the number of males and females set forth in the columns for sexes, 200 deaths returned from Kilkenny Union Workhouse for the years 1851, 1852, and 1853, of which no further particulars were furnished. These deaths are also included in the total of the column "Causes not specified."

86

Table I.—Deaths in Workhouses and Workhouse Hospitals,—showing, by Localities, the Number, Amount by the Masters of Workhouses and

(a) The Return from Ennis Union Workhouse does not specify the cause of death in 410 instances—197 males and 213 females; the Master states he has no record of the cause of death in cases which occurred in the Spring of 1851.

(b) The Return from Scarriff Union Workhouse does not specify the cause of death in 369 cases—189 males and 180 females—which occurred in 1851.

(c) The Return from the Cork Union Workhouse does not specify the cause of death in 1,305 cases—698 males and 607 females—as the record is deficient in this particular prior to the Spring of 1852.

(d) Fermoy Union Workhouse Return does not specify the cause of death in 408 cases—191 males and 217 females—which occurred prior to the Summer of 1852.

(e) The Return from the Middleton Union Workhouse is deficient as to the cause of death in 722 cases—338 males and 384 females; the Master states, that "in the Record of Deaths Book kept previous to the 28th September, 1853, there was no column in which to specify the cause of death."

nd Causes of Death, from the 30th March, 1851, to the 7th April, 1861, so far as they have been returned by ne Medical Attendants—continued.

[UNSTER—continued.

(k) The Return from Kilmallock Union Workhouse is deficient as to the cause of death in 304 cases—162 males and 142 females—as there was no record ket the cause of death until the close of Summer, 1851.

(l) The Return from the Nenagh Union Workhouse includes 916 cases—111 males and 505 females—without specifying ages, &c. The Master states the Book containing the Record of Deaths from 30th March, 1851, to 26th March, 1853, is not available, and that he made out from the Minute Book the number of persons who died during that period. There is no medical return of cause of death of those who died previous to the Spring of 1855.

and Causes of Death, from the 30th March, 1851, to the 7th April, 1861, so far as they have been returned by the Medical Attendants—continued.

MUNSTER—continued.

<sup>\*</sup> The total, 14,255 deaths, returned from the Workhouses and Workhouse Hospitals of the province of Connaught, contains, in addition to the number of males and females set forth in the columns for sexes, 26 deaths returned from the Ballinasloe Union Workhouse for the year 1853, of which no further particulars were furnished. These deaths are also included in the total of the column "Causes not specified."

and Causes of Death, from the 30th March, 1851, to the 7th April, 1861, so far as they have been returned by the Medical Attendants—continued.

CONNAUGHT—continued.

<sup>•</sup> The total 148,749 deaths in Workhouses and Workhouse Hospitals, contains in addition to the males and females set forth in the columns for sexes, 226 deaths returned from the Union Workhouses of Kilkenny and Ballinnsloe, of which the sexes and causes of death were unspecified. These deaths are also included in the total of the column "Causes not specified." NOTES TO PAGES 104-5.

(a) The Return from Galway Union Workhouse does not specify the cause of death in 1,557 cases—725 males and 832 females. The Master states the cause of death was not recorded prior to the Summer of 1860.
(b) The Return from Gort Union Workhouse does not include the deaths which occurred prior to the Summer of 1852. The Master states there is no record of the deaths which took place in 1851 and the early part of 1852.
(c) The Return from Bullinasloe Union Workhouse is deficient as to cause of death in 615 cases—303 males and 312 females. The Master states "there is me record on this subject up to Spring 1854." In 26 instances the Return does not specify ages or sexes.

and Causes of Death, from the 30th March, 1851, to the 7th April, 1861, so far as they have been returned by the Medical Attendants-continued.

(d) The Return from the Tuam Union Workhouse does not include the deaths which occurred prior to the Autumn of 1852. The Master states that the record for this period "has been lost or mislaid."

(e) The Return from the Clifden Union Workhouse does not specify the cause of death in 92 cases—50 males and 42 females. The Master states he "can find no record of diseases from 30th March, 1851, to 27th April, 1851."

(f) The Return from the Mountbellew Union Workhouse does not include the deaths which occurred in 1851 and 1852. The Master states that there was no record of deaths up to 27th March, 1853.

(g) The Return from the Newport Union Workhouse does not specify the cause of death in 88 cases—38 males and 50 females. The Master states there is "ne record to be found in the workhouse of the cause of death during the Spring, Summer, and part of the Autumn of 1851."

(h) The Return from the Boyle Union Workhouse does not include the deaths which occurred previous to 1860. The Master states that "no record of the deaths which occurred in this workhouse from 1851 to 1859 having been preserved, he is unable to furnish the required information."
